

QA testing Project

How to obtain the page title using Selenium web driver?

We can obtain the web page title by using WebDriver.getTitle() function in selenium.

1) General Test Cases for Ecommerce Application:

- Check that the website is accessible and that it loads correctly.
- Check to see if the website has a user-friendly interface.
- Check to see whether the website includes a search box where consumers can look for items.
- Check to see if the website includes a shopping cart that allows users to add and delete things.
- Check to see if the website has a checkout procedure that walks consumers through the purchasing process.
- Check to see whether the website offers a support area where visitors may get information and assistance.

2) Product Buy Flow Test Cases:

- Check that consumers can use the search bar to find goods.
- Check sure consumers can see product characteristics and information.
- Check that users may add items to their shopping carts.
- Check that consumers may delete items from their shopping carts.
- Check that consumers may change the number of products in their shopping cart.
- Check that users may enter promotional codes or get discounts.
- Check that consumers may go to the checkout page and provide their shipping and payment details.
- Check that users receive an order confirmation and can track their shipping.

3) User Registration Test Cases:

- Check that users may establish an account using a valid email address and password
- Check that users may change their account details such as their name and address.
- Check that users can access and log out of their accounts.
- Check that users may change their passwords if they forget them.
- Check that users get an email confirmation after registration.
- Check that users may deactivate their accounts if they so wish.
